

ADDENDUM FOR VIDEO PROJECTS

ADDENDUM III: VIDEO

TECHNICAL SPECS

We ensure that files are created to your specifications provided in the initial documents. Should files need to be converted or re-worked in any way to comply with your final use or filetype requirements, we are more than happy to do so. However, should significant changes need to be made we may need to bill these separately.

RENDERING

Video files require a final step which compiles the video into a motion format frame-by-frame which we call "rendering". This step can take anywhere from a few minutes, to a few hours, to a few days depending on the overall size of the project. Please be aware that even minor changes require the entire file to be regenerated. As such, if these processes take massive amounts of time, we may need to bill extra for extraordinary processing times. It should also be noted that render times will need to be factored into any due dates for deliverables.

ASSETS

Some content providers may have specific criteria whereby they flag a video for containing objectionable content which can result in the unpublishing or removal of the video. We are not responsible for third-party content policies or litigation but can provide insight and recommendations in cases where this applies.

ADDITIONAL COSTS

There are some additional costs to video projects. You should be aware of (1) costs of bandwidth for serving video content, (2) the costs of hosting for storing video content, (3) any other associated fees.

Unless otherwise noted, Starcresc is not responsible for any of these services or any associated fees.
